

PLYMOUTH'S PLAN FOR PLASTICS

FOR PEOPLE AND PLANET

2020 Update Britain's Ocean City: Plastics Task Force

Introduction

As Britain's Ocean City, Plymouth is at the vanguard of the worldwide effort to eliminate plastics from our natural environment.

In 2018 Britain's Ocean City: Plastics Task Force created the first Plymouth's Plan for Plastics in a truly citywide collaboration of organisations, businesses, education organisations, research establishments and communities.

This document provides updated information and further clarity on the key priorities for the city as we move towards avoiding all unnecessary single use plastic by 2030 and as such supports Plymouth City Council's Plymouth Climate Emergency Action Plan 2019.¹

Plymouth Climate Emergency Action Plan 2019

European Regional Development Fund

News ways to tackle plastic pollution

Since launching the first edition of Plymouth's Plan for Plastics in June 2018, Britain's Ocean City: Plastics Task Force have successfully secured a share of €14million of EU INTERREG funding as part of the Britain's Ocean City: Plastics Task Force. This is a partnership project with 18 organisations from across France and England that seeks to understand and reduce the impacts of plastic pollution in the marine environment by the end of 2022.

The information gathered from research in areas across France and England will allow the Cross-Channel partnerships to tackle some of the four million tonnes of plastic waste that enter the sea via rivers every year.² This forms the basis of Plymouth's Plan for Plastics targets over the next phase.

Further information: https://preventingplasticpollution.com

2 Schmidt et al 2017. Environ. Sci. Technol. 51, 12246-12253

Every year an estimated 12.2 million tonnes of plastic enters the world's seas from land, rivers and marine activities. Research has shown that the main contributor is larger plastic litter, including everyday items such as drinks bottles and other types of plastic packaging³

Plastics in the Marine Environment 2016. Eunomia

Context

As Plymouth Britain's Ocean City with an enviable natural environment and world-renowned marine research, Plymouth is well placed to lead cutting off this flow of plastics into our seas

Plastic is a versatile synthetic material which comes in a wide range of forms and because of this versatility it has been used in many ways in almost every aspect of modern life. In some cases, such as food hygiene and healthcare, plastics are vital products for which there are currently no viable alternatives.

However, the elements that make plastic so durable also make them resistant to natural processes of degradation. The sheer scale of plastic use and consumption by humans is now recognised as one of the most serious environmental challenges facing the Earth.

We can however rapidly reduce our consumption of avoidable plastic, such as single use plastic bottles. Together we can investigate sustainable alternative products and technologies to reduce our reliance on plastics, and move towards eliminating its unnecessary use. As Britain's Ocean City, our collective goal is to become a global leader in solving this problem.

In 2019 Plymouth
was awarded
'Plastic Free
Community'
status by the
charity Surfers
Against Sewage in
recognition of its
hard work with all
partners across
the city to reduce
single use plastic

Following the success of the first edition of Plymouth's Plan for Plastics, this updated version of the plan will continue to focus and drive a citywide effort to significantly reduce our use of single use and avoidable plastics and lead work to achieve our ambition of reducing plastic use to an absolute minimum by 2030.

Plymouth's Plan for Plastics will also include an element of work to enable everyone, but particularly, children and young people, to access and enjoy the natural environment so that they can reclaim their blue and greenspaces for their generation and for their children.

The delivery of Plymouth's Plan for Plastics will be driven, monitored and supported by Britain's Ocean City: Plastics Task Force, which includes representatives from public bodies, the environmental sector, the voluntary sector, the charity sector, academia, industry and businesses.

Achievements: Much has been achieved since the launch in 2018 with actions across all five themes and by all partners; a full list is given in the Achievement to date section.

Principles

The plan is framed around five fundamental principles which interlink to inform best practice and ensure collaborative working. These themes are:

- Avoid
- Recycle
- Innovate
- Connect
- Communicate

Each theme is managed by a lead within Britain's Ocean City: Plastics Task Force, although they obviously link together and all partners will be required to work together to achieve the delivery as a whole. This is illustrated in Figure 1.

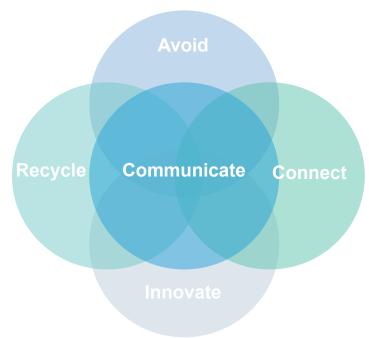

Figure 1: The five themes of the Plymouth Plan for Plastics

These fundamental principles will enable organisations, businesses, community groups and schools to develop their own detailed action plans to achieving our collective citywide ambition. The principles will drive the delivery of both long and short-term outcomes.

Avoid

This principle will continue to drive immediate reductions in avoidable plastic consumption in the city, building on achievements made between 2018 and 2020 by:

- Continuing to drive forward a significant reduction of single use and avoidable plastics by 2030.
- Promoting the awareness required to reduce our use of single use and avoidable plastics and the actions needed to limit the impact of the pollution they have already created.
- Leading a wholesale change in the use of plastics within organisations, communities, schools
 and businesses across the city, initially focusing on the 'quick wins' that can rapidly reduce
 avoidable plastic use.
- Promoting the overall aims of the plan and encouraging every individual in the city to do their bit through local action and easily accessible information.
- Expanding our proactive network of 'plastic free' pioneers, ambassadors and champions to
 assist in leading realistic solutions that can be shared, basing our approach on the Plastic Free
 Communities toolkits developed by Surfers Against Sewage and our recognized status as a
 'Plastic Free Community'.
- Encouraging behaviour change by ensuring that the alternatives to plastic are easily available and well understood.
- Ensuring that the alternatives promoted are cost effective and that the choices recommended do not contribute to a larger environmental footprint than the plastic they replace.
- Establishing how the Plan for Plastics can augment other citywide plans and our approach to tackling climate change.

Preventing Plastic Pollution Project outcomes

- Engaging with businesses in the reduction and removal of plastics in the Tamar river catchment.
- Supporting the development of a framework for Catchment Based Approach (CBA) for businesses and retail, tourism and leisure and schools and communities.

- Delivering 50 plastic free businesses and 50 plastic free schools.
- Recruiting 50 community stakeholders.
- Reducing plastic in hospitality, tourism and events sector by delivering a plastic-free fireworks and events protocol.
- Providing a central database and website for local plastic free solutions and circular economy opportunities.
- Installing two water fountains
- Installing one waste sculpture.

Recycle

This principle will drive a change which will prevent plastics polluting the natural environment and enable plastic products to be reused or recycled while alternatives to plastics are investigated and developed.

This will be achieved by:

- Increasing recycling rates, and ensuring all plastics that can be recycled actually are.
- Working with the Communicate theme to bring awareness around data on plastics recycling rates
- Working with partners and the Innovate theme to support research in plastic reduction and recycling.
- Working with the partners across the city and industry to identify the types of plastic products
 that do not currently have an identified recycling stream and developing recycling options.
- Identifying and supporting new ways to make it easier for people to contribute to Plymouth's Plan for Plastics goals.
- Supporting improvement in quality of recycled plastics. Exploring a plastic off-setting scheme
 for organisations across the city to compensate for the plastic use that is unavoidable in the
 short term.
- Identifying and supporting commercially-viable methods for recycling marine plastics.

Preventing Plastic Pollution Project outcomes

Piloting four plastic free initiatives.

Innovate

This principle, using academia, manufacturing and creative approaches, will drive forward a long-term ambition to guide us towards sustainable use of plastics in society by:

- Harnessing the significant knowledge base in the city.
- Facilitating collaboration between academia, manufacturing, industry and governance.
- Evaluating our pioneering approach in order to deliver robust impact.
- Gaining a better understanding of the behavioural factors that influence littering.

Preventing Plastic Pollution Project outcomes

- 15km of waterfront assessed for level and type of plastic pollution in order to test/ground truth/inform a mapping model.
- Using citizen scientists to assess ecological impacts of reducing plastic pollution.
- Supporting the development of informed risk mapping via data collected through surveys.
- Trialling and evaluation of marine litter collection devices.
- Installing 200 yellow fish markers on surface drains.

Connect

This principle will drive forward work to foster connections to the Ocean. Ensuring that everyone has the opportunity to explore, experience and enjoy their natural environment, encouraging positive action for the future by:

- Providing a programme for communities to connect them with the ocean, increasing access to the marine environment. This will coincide and enhance plans for the Plymouth Sound National Marine Park.
- Delivering a coordinated programme of ocean activities including beach cleans, wildlife surveys and fun activities.
- Supporting community, public and school engagement programmes that will increase knowledge and understanding of the ocean and the issues it faces.
- Explore new ways of engaging and connecting local residents to the environment.

Preventing Plastic Pollution Project outcomes

- Empower waterfront communities with citizens engaged to assist in assessments.
- Running community events within the rivers around Plymouth and the river Tamar Catchment.
- Working with partners on common methodology for removal of plastic pollution (e.g. contractors vs. community events).
- Support the 50 community stakeholders (recruited in the Avoid theme).
- Delivering angling waste collections service.
- Reducing plastic pollution in recreational sailing sector through audits and training via the framework approach.

Communicate

This principle will act as an overarching theme across Plymouth's Plan for Plastics, supporting the other principles by effectively sharing the plastics message and sharing achievements across the city. This will be achieved by:

- Coordinating Britain's Ocean City: Plastics Task Force activities and meetings.
- Collaboratively working with partners to develop and implement effective communications strategies, learn from experience and share best practice.
- Producing and amalgamating advice and best practice, including publications, press releases, website content, and social media materials that share Britain's Ocean City: Plastics Task Force activities and achievements.
- Identifying opportunities to enhance funding and the reputation of Plymouth's Plan for Plastics.
- Ensuring consistency and regard is kept for the Preventing Plastic Pollution EU INTERREG branding when sharing the Plastic message across Britain's Ocean City: Plastics Task Force.
- Supporting the development and marketing of products to ensure the reduction of single use and avoidable plastics.

Preventing Plastic Pollution Project outcomes

 Delivering an integrated city-wide Partnership to bring together and oversee roll-out of Plymouth based actions providing knowledge sharing and support.

Delivery

This plan recognises that everyone has a role to play and it is only through all Britain's Ocean City: Plastics Task Force members working together that the vision will be achieved of reducing the use of unnecessary plastic

Plan for Plastics will be delivered through the 'Britain's Ocean City: Plastics Task Force whose objectives are to:

- Provide strategic leadership and drive the citywide effort to reduce plastic use to an absolute minimum by 2034
- To promote and drive the delivery of the Plan for Plastics and its five fundamental principles for enabling actions
- To provide a framework for the co-ordinated action around plastic reduction
- Plymouth City Council provides the secretariat whilst all Britain's Ocean City: Plastics Task Force members support the resourcing of the delivery of the plan through work to deliver against the themes. With the exception of the work to deliver the EU 'Preventing Plastic Pollution' element of the Britain's Ocean City: Plastics Task Force members are all responsible for seeking and securing additional funding to deliver the plan
